## RECO's COMPANY SPECIFIC ADDENDUM

### A. Introduction to RECO's Company Specific Filing

In its Decision and Order dated April 17, 2024 in Docket No. ER24030191, the New Jersey Board of Public Utilities ("Board" or "NJBPU") directed New Jersey's four investor owned electric distribution companies ("EDCs") to file proposals with the Board by no later than July 1, 2024 on the procurement of basic generation service ("BGS") for the period beginning June 1, 2025. This document constitutes the company-specific portion of the compliance filing for Rockland Electric Company ("RECO" or the "Company") mandated by the Board. RECO's filing also includes and incorporates by reference the Proposal for BGS Requirements to be Procured Effective June 1, 2025, filed by New Jersey's four EDCs on July 1, 2024 ("EDC Compliance Filing").

### B. Use of Committed Supply

"Committed Supply" means any and all power supplies to which the EDCs have an existing physical or financial entitlement that may extend into or through the BGS bid period. This will include Non-Utility Generation ("NUG") contracts, including any restructured replacement power contracts; any wholesale purchases previously contracted for by the EDCs, and any generation assets, or options for/calls upon assets, still owned or under contract to the EDCs. RECO has no Committed Supply.

### **C. RECO Tranche Configuration**

In its Decision and Order issued June 18, 2012 in Docket No. ER12020150, the Board lowered the threshold for the BGS-CIEP class to include all commercial and industrial customers with a peak load share of 500 kW and greater.<sup>1</sup> RECO continues to comply with this directive and will include these customers as one tranche in the BGS-CIEP Auction.

As to the BGS-RSCP Auction, RECO currently has one 36-month tranche that terminates on May 31, 2025, two 36-month tranches that terminate on May 31, 2026, and one 36-month tranche that terminates on May 31, 2027. Accordingly, since the load requirements of RECO's Eastern Division are comprised of a total of four tranches, in the BGS-RSCP Auction for the period commencing June 1, 2025, RECO will include one 36-month tranche (for the period June 1, 2025 through May 31, 2028).

### **D. Contingency Plans**

While not every contingency can be anticipated, the following three contingencies are of particular concern:

- (a) The Auction Process fails to provide 100 percent of RECO's BGS Load (i.e., an insufficient number of bids to provide for a fully subscribed auction volume);
- (b) A default by one of the winning bidders prior to June 1, 2025; and
- (c) A default during the supply period.

The three contingencies are discussed further below:

- (a) Insufficient Number of Bids

---

<sup>1</sup> In accordance with the Board's December 8, 2005 Decision and Order (see footnote 13, at page 16), RECO will determine all eligibility criteria by measuring when a customer's billing demand exceeds the eligibility level during any two months of a calendar year.

A viable Auction Process requires a sufficient degree of competition. To encourage a sufficient degree of competition, the volume of BGS power purchased at the Auction will be finally decided after the receipt of first round bids. Provided that there are sufficient bids at the starting price, the Auction will be held for 100 percent of the BGS Load<sup>2</sup> (i.e., both BGS-RSCP and BGS-CIEP).

It is possible, however, that the amount of initial bids will not result in a competitive auction for 100 percent of the BGS Load. Any determination to reduce the percentage of BGS Load included in the Auction Process will be made by the Auction Manager, in consultation with the EDCs and the NJBPU advisor. It is also possible that none of RECO's BGS Load tranches will be bid upon even at the starting price.

In the event that the Auction Volume is reduced to less than 100 percent of BGS Load, or there are unsubscribed tranches at the end of the Auction, each EDC will implement a contingency plan for the remaining tranches. Under RECO's contingency plan, RECO currently intends to purchase that percentage of BGS Load, not met through the Auction Process, in PJM administered markets.<sup>3</sup> This purchase is a strong feature of the Auction proposal because it provides bidders a strong incentive to participate in the Auction Process.

During the 2006 BGS Auction, RECO did not receive any bids on its BGS-CIEP tranche. As a result, RECO was forced to purchase its BGS-CIEP supply from the PJM markets. In the event that RECO is not able to auction its BGS-CIEP tranche successfully in the 2025 BGS Auction, RECO proposes to employ the following procedures:

---

<sup>2</sup> Excluding the three 36-month tranches that were auctioned off successfully in the previous two BGS-RSCP Auctions.

<sup>3</sup> While RECO's current intention is to purchase from PJM administered markets, RECO reserves the right to consider other alternatives. Although unlikely, in the event that purchases from New York Independent System Operator ("NYISO") administered markets provide a more cost-effective alternative to PJM, RECO reserves the right to make purchases from NYISO administered markets.

- RECO will not submit any day-ahead energy bids, rather the BGS-CIEP load will be filled from the PJM real time market.
- RECO will prepare a BGS-CIEP load backcast for the previous day and submit this backcast to PJM.
- RECO will purchase capacity credits from eRPM in PJM or from bilateral purchases on a monthly and daily basis.
- RECO will purchase ancillary services on a daily basis from the real time PJM market.
- RECO will set its CIEP Standby Fee at the level determined by the Board.
- RECO will fulfill any Class I, Class II, and Solar requirements, for its unsubscribed BGS tranches, by securing the needed PJM Generation Attributes Tracking (“GATS”) system generated renewable energy certificates (“RECs”) through any available PJM market, or bilaterally. In the event RECs are not available on the market, RECO will make the necessary Alternative Compliance Payments.
- All costs and revenue (with the exception of retail margin revenue) will flow through the reconciliation account for BGS-CIEP. Costs will include the procurement of all necessary services, including energy, capacity, ancillary services, Class I, II and Solar RECs, and any other expenses related to the implementation of RECO’s contingency plan.

(b) Defaults prior to June 1, 2025

If a winning bidder defaults prior to the commencement of the BGS service, then the open tranches may be offered to the other winning bidder(s) or these tranches will be bid out

as quickly as possible. Additional costs will be assessed against the defaulting company's BGS credit security.

(c) Defaults during the Supply Period

If a default occurs during the supply period, then Tranches supplied by the defaulting party may be offered to other suppliers, bid out, or procured in PJM administered markets. If a default involves RECO's 36-month BGS-RSCP tranche, RECO only will seek replacement supply until May 31, 2026. For the remainder of the 36-month period, RECO will seek replacement supply through whatever process is implemented by the Board for the period commencing June 1, 2026.

Additional costs will be assessed against the defaulting company's BGS credit security.

**E. Accounting and Cost Recovery**

The accounting and cost recovery that RECO proposes with respect to BGS is summarized in this section.

(a) System Control Charge ("SCC")

If applicable to RECO, the SCC will be calculated initially, and then annually on a cents per kWh basis and the charge will be applied to all of the Company's electric distribution customers. This charge would be published in a separate SCC tariff leaf. This tariff leaf would be filed with the Board upon the Board's issuance of the appropriate order(s). If applicable to RECO, the SCC would be applied to all distribution customers' bills to provide recovery for appliance cycling load management costs. The charge would be set initially to recover estimated annual

expenditures as approved by the Board. The SCC would be subject to deferred accounting with interest at the rate applicable to SBC deferrals.

(b) BGS-RSCP and BGS-CIEP Reconciliation Charges

In its Decision and Order in Docket No. ER12070643, the Board approved the Company's proposal to change the BGS-RSCP and BGS-CIEP reconciliation charges from a monthly to a quarterly mechanism. RECO will track and defer separately for the BGS-RSCP and BGS-CIEP classes of customers, on a monthly basis, any differences between BGS revenue and BGS costs.

BGS costs are comprised of the following:

1. Payments made for provisions of BGS-RSCP and BGS-CIEP service;
2. RECO's pro-rata share of any procurement of capacity, energy, and ancillary services, pursuant to its FERC-approved Power Supply Agreement, and other costs incurred, including hedging and costs associated with the RECO Request for Proposal ("RFP");
3. The cost of any procurement of capacity, energy, ancillary services, transmission, RPS compliance, and other costs incurred under the Contingency Plan less any payments recovered from defaulting suppliers;
4. Costs incurred by RECO to participate in the BGS Auction as well as any costs incurred to conduct the RECO RFP, including outside attorney and consultant expenses and other costs incurred by or allocated to RECO related to the conduct of the Auction; and
5. Any administrative costs associated with the provision of BGS-RSCP and BGS-CIEP service.

Administrative costs are defined as commonly-incurred or directly-incurred. Commonly-incurred costs are costs shared among all of the EDCs. Directly-incurred costs are costs specifically incurred by each EDC, individually.

- a. Commonly-incurred costs include, but are not limited to, the following:

- preparing and conducting the annual auction, which include all pre-auction development work, developing and printing materials, developing and maintaining the BGS auction website, conducting information sessions for prospective bidders, as well as other consulting services provided by the Auction Manager;
  - oversight of the auction process on behalf of the NJBPU, as performed by the Board's consultant;
  - rent and maintenance of office space in New Jersey for the Auction Manager;
  - outside counsel legal costs associated with the prosecution and/or defense of BGS patent claims; and
  - facility costs associated with viewing the annual auction in real time, which include, but are not limited to, costs for physical space and equipment/media connections.
- b. Directly-incurred costs include, but are not limited to, labor costs.

As noted, one element of commonly-incurred costs has been the costs associated with the rent and maintenance of office space in New Jersey for the Auction Manager to conduct the annual BGS Auction. As noted in the Joint EDC comments, in its November 2021 Board Order, the Board authorized the EDCs to sublet the BGS Office in Newark. The EDCs subsequently did sublet the office, and the revenues related to the same serve to offset other commonly-incurred EDC costs.

Estimates of commonly-incurred costs for each BGS Auction cycle are paid for by the winning bidders of the auction at the start of each Energy Year ("EY")<sup>4</sup> through the Tranche Fee. The difference between the estimated commonly-incurred costs and the actual commonly-incurred costs, and all the directly-incurred costs are paid by BGS customers through the BGS Reconciliation Charges.

Reconciliation charges are necessary to reconcile the differences between monthly BGS supply costs and BGS revenues from customers for BGS service.

---

<sup>4</sup> The Energy Year is defined as the 12-month period commencing June 1.

Separate BGS-RSCP and BGS-CIEP Reconciliation Charges, applicable to all BGS-RSCP and BGS-CIEP customers, respectively, will be calculated and assessed quarterly on a cents per kWh basis to reconcile previous over- or under-collections. The BGS-RSCP and BGS-CIEP Reconciliation Charges will be published in separate BGS Reconciliation Charge tariff leaves on a quarterly basis. These tariff leaves will be filed with the Board fifteen days prior to the first day of the effective quarter.

The BGS-RSCP and BGS-CIEP Reconciliation Charges will be subject to deferred accounting with interest and will be determined individually as set forth below:

The BGS-RSCP and BGS-CIEP Reconciliation Charges<sup>5</sup> will be used to true up the differences between BGS costs and BGS revenues from customers. Differences in costs and cost recovery will be computed for each month in the quarter and assessed through the BGS-RSCP and BGS-CIEP Reconciliation Charges applied to customers' bills in the following quarter. Two of these differences are as follows:

1. The difference between BGS Costs and BGS revenues for each month in the quarter.
2. The difference between the total reconciliation charge revenue intended to be recovered in each quarter and the actual reconciliation charge revenues recovered in the quarter. This difference will be driven by differences between actual kWh in the

---

<sup>5</sup> Included in the BGS-CIEP Reconciliation Charge will be recovery of the Per-Plug incentives provided under RECO's Electric Vehicle ("EV") Direct Current Fast Charging ("DCFC") 2-year program approved by the Board on November 17, 2023.

quarter in which the reconciliation charge was assessed and the kWh used to calculate the charge.

The reconciliation charges to be applied in the following quarter are calculated individually for BGS-RSCP and BGS-CIEP service as the net of the two differences described above on a monthly basis for the current quarter (plus or minus any cumulative under or over recovery from the prior quarter) divided by the forecasted BGS kWh for the following quarter.

For any given quarter, the reconciliation charges shall not exceed a charge or credit of 2.0 cents per kWh, including sales and use tax. In the event the 2.0 cents per kWh limit is imposed, any remaining over- or under-collection balance shall be included in the subsequent quarter's reconciliation charges to the extent possible within the 2.0 cents per kWh limitation.

The following table summarizes RECO's current process.

Reconciliation for the Months of:	Quarter Rate is In Effect:
February – April	June 1 - August 31
May – July	September 1 - November 30
August – October	December 1 - February 28
November – January	March 1 - May 31

Interest will be applied based on two-year constant maturity treasuries as published in the Federal Reserve Statistical Release on the first day of each month or the closest day thereafter on which rates are published, plus 60-basis points. However, the interest rate shall not exceed the Company's overall rate of return as authorized by

the Board. The interest rate will be determined for each month in the quarter based on the criteria above.

#### **F. Description of BGS Tariff Changes**

Draft tariff leaves indicating “X.XXX” for the rates that will change as a result of the BGS-RSCP and BGS-CIEP Auctions are included in Attachment A.

Final tariff leaves including the actual BGS rates and tariff provisions to become effective on June 1, 2025 will be filed with the Board upon its issuance of an appropriate Board order approving the BGS Auction Process.

#### **G. RECO RFP**

RECO’s Central and Western divisions are physically connected to the New York Control Area administered by the New York Independent System Operator (“NYISO”). Therefore, RECO must purchase the energy and capacity needs of its Central and Western BGS customers from markets administered by the NYISO.

With regard to the purchase of energy, in the Board’s November 17, 2023 Order in Docket No. ER23030124 (the “2023 Order”), the Board approved a Request for Proposal (“RFP”) process for RECO to solicit competitive bids from qualified bidders for fixed energy supply prices for BGS customers in RECO's Central and Western Divisions, commencing June 1, 2024. On January 30, 2024, RECO conducted its RFP for the period June 1, 2024 through May 31, 2027. As a result of the RFP, RECO entered a two year Fixed for Floating Energy Swap contract with Shell Energy Trading Risk Management, LLC and a one-year Fixed Floating Swap contract with Constellation Energy Generation, LLC. The Board approved this RFP result in its January 31, 2024, Order in Docket No. ER23030124. The RFP price will be rolled into

RECO's BGS auction price to develop a weighted average BGS-RSCP price for the period June 1, 2024 through May 31, 2027. Therefore, RECO does not need to conduct an RFP for the 2025 BGS auction.

**(b) Default Procurement**

In the event of a default procurement, RECO will purchase the energy needs of its BGS customers in the Central and Western Divisions in the NYISO Day-Ahead and Real Time Markets without a financial hedge. Currently, to determine rates for BGS service classifications, the Company calculates a load-weighted price to calculate BGS service classification rates. The load-weighted price combines, for the Central/Western division, the hedging contract fixed price and the Company's forecast of the NYISO capacity price, and for the Eastern division, three-year, tranche-weighted BGS auction prices. For this default proposal, the Company will use the BGS auction price as the input for the Central/Western portion of the load-weighted price.

**H. BGS Rate Design Methodology**

RECO BGS Pricing Spreadsheet

As described in the EDC Compliance Filing, the resulting charge for each BGS rate element (e.g., SC No. 1 summer charge, winter charge) for BGS supply service will be based on a factor applied to the tranche weighted average of the winning BGS-RSCP bid prices adjusted for the seasonal payment factors. These factors have been developed based on the ratios of the estimated underlying market costs of each rate element (for each service classification) to the overall all-in BGS cost. The tables included in Attachment B present all of the input data, intermediate calculations, and the final results in the calculation of these factors.

Table #1 (% Usage during PJM On-Peak Period) contains the percentage of on-peak load, by month, for each service classification. The on-peak period as used in this table (referred to as PJM periods) is defined as the 16-hour period from 7:00 AM to 11:00 PM, Monday through Friday. All remaining weekday hours and all hours on weekends and holidays recognized by the National Electric Reliability Council (“NERC”) are considered the off-peak period. This is consistent with the time periods used in the forwards market for trading of bulk power. The values in this table for each month are the average on-peak percentages from the year 2024 based on load profile information.

Table #2 (% Usage During RECO On-Peak Billing Period) contains percentages of on-peak load, by month, for RECO BGS-RSCP service classifications that are billed on a time of use basis (SC No. 1 Voluntary Time of Day (“SC No. 1 VTOD”) and SC No. 3). These percentages are based on RECO’s time periods used for customer billing.

Table #3 (Class Usage @ customer) contains monthly sales forecasted for the calendar year 2025 with a migration adjustment for retail access. The values in Table #3 will be updated in January 2025 to better reflect the amount by Service Classification that could be in effect starting on June 1, 2025.

Table #4 (Forward Prices – Energy Only @ bulk system) contains the forward prices for energy, by time period and month, for the BGS analysis period. These values are a weighted average forecast of PJM and NYISO energy prices as calculated in Table #18. The PJM values are the published energy on-peak forwards for the PJM West trading hub for the period of June 2025 to May 2026, and an estimate based on off/on peak LMP ratios for the off-peak periods of each month. The NYISO

values are based on a combination of forward and historical prices. An adjustment to the PJM forward prices used to calculate the prices contained in Table #4 must be made to correct for the effects of the basis differential in the PJM system between the PJM West trading hub and the RECO zone where the BGS supply will be utilized. Table #18 contains an estimate of this basis differential, by month and time period, which when multiplied by the prices at the PJM West trading hub will result in costs for power delivered into RECO's PJM zone.

Table #5 (Losses) contains the factors utilized for average system losses, including PJM losses and unaccounted for supply (net of marginal losses) that are input by service classification and voltage level. Loss factors are those in RECO's current, Board approved, Third Party Supplier Agreement. PJM losses are the average percentage PJM EHV losses plus Inadvertent Energy for the period of January 2021 to December 2023, which equals 0.6349%. Marginal losses are excluded from the loss factors based on historic de-rating factors for the period January 2021 to December 2023.

Table #6 (Summary of Average BGS Energy Only Unit Costs @ customer – PJM Time Periods) is the calculation of the energy only costs by service classification, time period and season. These values are the seasonal and time period average costs per MWh as measured at the customer billing meter (from Table #3), based on the forward prices (from Table #4) adjusted for losses (from Table #5), and monthly time period weights (from Table #1). These average costs do not include the costs associated with Ancillary Services, Renewable Portfolio Standard compliance, Generation Capacity or Transmission costs, which will be considered in subsequent calculations.

Table #7 (Summary of Average BGS Energy Only Costs @ customer – PJM Time Periods) indicates the total value, in thousands of dollars, of the average BGS energy-only costs. These are the results of the multiplication of the unit costs from Table #6, the monthly time period weights from Table #1 and the total sales to customers from Table #3.

Since the end result of these calculations is to be utilized in the development of retail BGS rates, the rates utilizing time of use pricing must be developed based upon the time periods as defined for billing.

Table #8 (Summary of Average BGS Energy Only Units Costs @ customer – RECO Time Periods) shows the result of this adjustment for SC No. 1 – VTOD and SC No. 3 rates billed on a time of use basis. These values are calculated by starting with the values in Table #6. Because RECO bills fewer peak hours than the peak hours defined by PJM, the prices in Table #6 would result in a revenue shortfall when applied to RECO's SC No. 1 – VTOD and SC No. 3 peak and off-peak kWh consumption. To correct for this difference, the shortfall for each is divided by the total kWh for the SC and the resulting per unit shortfall is added to both the on-peak and off-peak charges in Table #6 to arrive at the prices in Table #8. The next steps set up the values necessary for the inclusion of the costs of the Generation Capacity and Transmission.

The top portion of Table #9 (Generation & Transmission Obligations and Costs and Other Adjustments) shows the total obligations with a migration adjustment, by rate schedule, that are currently being utilized in the year 2024. The values in the top portion of Table #9 will be updated in January 2025 to better reflect the aggregate amount by rate schedule that could be in effect on June 1, 2025. The middle portion of

this table shows the number of summer and winter days and months that are used in this analysis. The bottom portion of this table shows the annual cost for transmission service and the average price of generation capacity for the three relevant RPM auctions. Typically, the generation capacity costs used in the development of the BGS-RSCP rates are the relevant current wholesale market prices for capacity based on the average 2025/2026, 2026/2027, and 2027/2028 Base Residual Auction (“BRA”) results under the Reliability Pricing Model (“RPM”) applicable to load served in the RECO zone. This process has been impacted in recent years by delays in conducting the BRAs- resulting in the need for contract supplements with Capacity Proxy Prices for delivery years with delayed BRAs.

Due to the postponements of the BRAs, contracts from the 2023 and 2024 BGS auctions contained supplements with Capacity Proxy Prices. With the prior postponements of the BRAs for the 2025/2026 Delivery Year and the 2026/2027 Delivery Year, a Capacity Proxy Price of \$44.63/MW-day was used in place of the 2025/2026 BRA value in the 2023 contracts, while a Capacity Proxy Price of \$47.46/MW-day was used in place of the 2025/2026 BRA value and a Capacity Proxy Price of \$49.05/MW-day was used in place of the 2026/2027 BRA value in the 2024 contracts.

At this time the results of the BRAs for the 2025/2026, 2026/2027, and 2027/2028 Delivery Years are not yet available, but the BRAs are scheduled to be held in July 2024, December 2024, and June 2025, respectively. Given the continued delay in the schedule of these BRAs, a Capacity Proxy price of \$53.76 per MW-day has been used for the 2025/2026 Delivery Year, and a Capacity Proxy Price of \$50.90 per MW-day has been used for the 2026/2027 and 2027/2028 Delivery Years, respectfully.

For EY 2026, if Supplement A to the BGS-RSCP Supplier Master Agreement is approved by the BPU and the BRA for the 2025/2026 Delivery Year has not occurred at least five business days prior to the BGS-RSCP Auction, payments to BGS-RSCP Suppliers will be adjusted for the difference between the “Zonal Capacity Price,” which is the price paid by BGS-RSCP Suppliers for Capacity in the Company’s PJM Zone, as may be determined under the Reliability Pricing Model or its successor or otherwise, and the Capacity Proxy Price for the 2025/2026 Delivery Year.

For EY 2027, if Supplement B to the BGS-RSCP Supplier Master Agreement is approved by the BPU and the BRA for the 2026/2027 Delivery has not occurred at least five business days prior to the BGS-RSCP Auction, payments to BGS-RSCP Suppliers will be adjusted for the difference between the “Zonal Capacity Price,” which is the price paid by BGS-RSCP Suppliers for Capacity in the Company’s PJM Zone, as may be determined under the Reliability Pricing Model or its successor or otherwise, and the Capacity Proxy Price for the 2026/2027 Delivery Year.

For EY 2028, if Supplement C to the BGS-RSCP Supplier Master Agreement is approved by the Board and the BRA for the 2027/2028 Delivery has not occurred at least five business days prior to the BGS-RSCP Auction, payments to BGS-RSCP Suppliers will be adjusted for the capacity price difference between the “Zonal Capacity Price,” which is the price paid by BGS-RSCP Suppliers for Capacity in the Company’s PJM Zone, as may be determined under the Reliability Pricing Model or its successor or otherwise, and the Capacity Proxy Price for the 2027/2028 Delivery Year.

RECO will file new tariff sheets for EY 2027 and EY 2028, reflecting the impact of this price adjustment. The rate design spreadsheets include the formulas that will be used to reflect the impact of payments made pursuant to the Supplements.

The SMA Supplements signed by BGS-RSCP Suppliers in February 2023 and February 2024 are still in effect for a portion of the load for EY 2026 (i.e., the year beginning June 1, 2025). Payments to BGS-RSCP suppliers that executed the Supplements to the SMAs approved by the Board on November 9, 2022 and November 27, 2023 will be adjusted for the price difference between the price paid by the BGS-RSCP Suppliers for Capacity in the Company's PJM Zone and the Capacity Proxy Price for the 2025/2026 Delivery Year. Upon the conclusion of the Third Incremental Auction, or the RPM's successor or otherwise, the price paid by the BGS-RSCP Suppliers for Capacity in the Company's PJM Zone will be known. At that time RECO will file new tariff sheets reflecting the impact of the Supplements. The rate design spreadsheets include the formulas that will be used to reflect the impact of payments made pursuant to the Supplements executed by BGS Suppliers in February 2023 and February 2024. Due to the delays in the BRA schedule a Capacity Proxy Price of \$53.76 per MW-day is used as an approximation for the Final PJM RPM Net Zonal Price for the 2025/2026 Delivery Year.

The cost of transmission service is equal to the rate in the PJM Open Access Transmission Tariff for network transmission service in the RECO zone. The generation capacity costs are based on an estimate of the relevant current wholesale market prices in the PJM (i.e., three-year average for the period 2025 to 2028 for RECO using a proxy price for 2028), and NYISO zones as calculated in Table #19. Also shown is the level of blocking in the BGS charges for SC No. 1, which will be utilized in the later calculations of the blocking of BGS charges for this service classification group.

An estimate of the cost of ancillary services and Renewable Portfolio Standard is included in Table #10 (Ancillary Services and Renewable Portfolio Standard). The Ancillary Services estimate is a weighted average of estimated Ancillary Services costs in RECO's PJM zone (i.e., \$2 per MWh) and RECO's estimate of Ancillary Services costs in RECO's NYISO zone as calculated in Table #20. Additionally, Renewable Portfolio Standard costs estimated to be \$22.64 per MWh are included in the calculation of the BGS-RSCP rates to reflect compliance costs.

Table #11 (Summary of Obligation Costs Expressed as \$/MWh @ customer for non-demand rates only) shows the result of the allocation of both the transmission and generation costs on a per MWh basis to those service classifications under which BGS service will be billed only on a per kWh basis.

Table #12 (Summary of BGS Unit Costs @ customer) is the result of the inclusion of the transmission, generation capacity, and Ancillary Services costs to the costs shown in Table #8. The bottom portion of this table shows the total estimated costs for BGS, based on the assumptions utilized in the above tables, and the average per unit cost, as measured at the customer meters and the bulk system meters.

Table #13 (Ratio of BGS Unit Costs @ customer to All-In Average Cost @ transmission nodes) indicates the ratio of the individual rate element costs from Table #12 to the overall all-in cost as measured at the bulk system plus constant, where applicable.

Table #14 (Summary of BGS Unit Costs Less Transmission @customer) provides the BGS unit costs as developed in Table 12, with the exception of transmission. The bottom portion of the table shows the total estimated costs for BGS

less transmission costs and the average unit cost as measured at the customer meters and the bulk system.

Table #15 (Ratio of BGS Unit Costs Less Transmission @ customer to All-In Average Cost @ transmission nodes) indicates the ratio of the individual rate element costs from Table #14 to the overall all-in cost as measured at the bulk system. These ratios are used to establish the BGS prices to retail customers.

Table #16 (Summary of Total BGS Costs by Season) shows the summary of the total and percentage of costs by rate and by season. A calculation in the lower portion of this table shows the resulting average costs per MWh for the winter and summer costs and MWhs, while the ratio of these seasonal unit costs to the all-in cost (from Table #12) is shown in the lower right-hand portion of this table.

Table #17 (Summary of Total BGS Costs by Season Less Transmission) shows the summary of the total and percentage of costs by rate and by season. This is similar to the values indicated in Table #16, however this table excludes the cost for transmission. A calculation in the lower portion of this table shows the resulting average costs per MWh for the winter and summer costs and MWhs, while the ratio of these seasonal unit costs to the all-in cost (from Table #14) is shown in the lower right-hand portion of this table.

Tables #18 (Forward Energy Prices), #19 (Generation Capacity Prices), and #20 (Ancillary Services and Renewable Portfolio Standard Prices) show the calculation of weighted average prices for energy, generation capacity and Ancillary Services as more fully described under “Table #4”, “Table #9” and “Table #10”. An estimate of the effects of the cost of the Renewable Portfolio Standard is included in the

development of the final BGS rates. The values of \$2.07<sup>6</sup> per MWh and \$22.64 per MWh are used, respectively for ancillary services and Renewable Portfolio Standard Prices. Since the actual costs are a complex combination of many factors, this Board-approved estimate of the overall annual average value, expressed on a dollar per MWh basis, is used as a reasonable and practical alternative.

The second spreadsheet used in the calculation of the final BGS-RSCP rates is included as Attachment C. The tables in this spreadsheet calculate the weighted average winning bid price and convert it into the final BGS-RSCP rates that are charged to customers. An explanation of each of the six tables, labeled as Table A through F, is as follows:

Table A (Weighted Average Price Calculation) contains the results of the BGS (i.e., current and prior two) auctions. The Capacity Proxy Price True-up cost in cents per kWh will be used to reflect the impact of payments made pursuant to the supplements executed by BGS Suppliers in February 2023 and February 2024. Upon conclusion of the Third Incremental RPM Auction through the Reliability Pricing Model or its successor or otherwise, the price paid by BGS-RSCP Suppliers for Capacity in the Company's PJM Zone will be known. The Capacity Proxy Price True-Up will then be determined by the price difference between the price paid by BGS-RSCP Suppliers for Capacity in the Company's PJM Zone and the Capacity Proxy Price for the 2025/2026 Delivery Year. The value of the recently concluded BRA in June of 2024 is used as an approximation of the price paid by BGS-RSCP Suppliers for Capacity in the Company's PJM Zone for 2025/2026. The table also includes the

---

<sup>6</sup> The weighted average of both PJM and NYISO ancillary service cost estimates.

impacts of RECO's RFP for the Central and Western Divisions, where the RFP winning bid price is applied to the results of the prior two BGS auctions.<sup>7</sup> From these values, the weighted average total price (shown on line #48) is calculated. All the formulas used in this table are shown in the right-hand column of this table, under the head of "Notes." To the extent the seasonal factors for the 12-month BGS period beginning June 1, 2025 (as calculated in Table #16) produce a summer payment factor less than one and a winter payment factor greater than one, the Company reserves its right to set the seasonal factors to 1.0 for both the Summer and Winter periods in any updates to the Company's BGS Pricing Spreadsheet. Accordingly, the Company has set the seasonal factors to 1.0 for both the Summer and Winter periods.

Table B (Ratio of BGS Unit Costs Less Transmission @ Customer to All-In Average Cost @ transmission nodes) is a repeat of the values shown in Table #15 from Attachment B, the bid factors calculated based on current market conditions.

Table C (Determination of Preliminary Retail Rates to be Charged to BGS Customers) contains the preliminary customer BGS-RSCP rates as the product of the weighted average total price (from Table A) and the Bid Factors from Table B.

Table D (Calculation of Rate Adjustment Factors) contains a comparison of the total anticipated rate revenue billed to customers based on the preliminary BGS-RSCP rates developed in Table C and the anticipated total season payments to BGS suppliers, based on the data in Table A. The calculation of the Rate Adjustment Factors is also performed in this table. These factors are equal to the seasonal dollar

---

<sup>7</sup> The prices shown for the tranche to be secured in the 2025 BGS Auction are for illustrative purposes only and will be replaced with actual data in determining RECO's final June 2025 BGS-RSCP rates.

differences between the anticipated billed revenue and supplier payments, divided by the total anticipated seasonal billed BGS-RSCP portfolio related charges.

Table E (Final Retail BGS Rates) contains the final adjusted BGS-RSCP rates, which are equal to the preliminary BGS–RSCP rates shown in Table C times the seasonal Rate Adjustment Factors that were developed in Table D. The resulting rates are then adjusted to include the New Jersey Sales and Use Tax at the rate of 6.625%.

Table F (Spreadsheet Error Checking) contains a comparison of the total anticipated rate revenue billed to customers based on the final BGS-RSCP rates developed in Table E and the anticipated total season payments to BGS suppliers, based on the data in Table A.

### **I. Capacity Charges**

Capacity charges are the separate charges designed to recover the costs associated with generation capacity for BGS-RSCP customers. These charges are expressed on a per-kW of generation capacity obligation basis.

Typically, the generation capacity costs designed to be used in the development of the BGS-RSCP rates are the relevant current wholesale market prices for capacity based on the average, 2025/2026, 2026/2027, and 2027/2028 BRA for RPM results applicable to load served in the RECO zone. This process has been impacted in recent years by delays in conducting the BRAs resulting in the need for contract supplements with Capacity Proxy Prices for delivery years with delayed BRAs. Due to the postponement of the BRAs, contracts from the 2023 and 2024 BGS Auctions contained supplements with Capacity Proxy Prices.

With the prior postponement of the BRAs for the 2025/2026 and 2026/2027 Delivery Years, Capacity Proxy Prices of \$44.63 and \$47.46 per MW-day have been used in place of the 2025/2026 BRA values and a Capacity Proxy price of \$49.05/MW-day was used in place of the 2026/2027 BRA values.

At this time the results of the BRAs for the 2025/2026, 2026/2027, and 2027/2028 Delivery Years are not yet available, but the BRAs are scheduled to be held in July 2024, December 2024, and June 2025, respectively. Given the continued delay in the schedule of these BRAs for the 2025/2026 Delivery Year, a Capacity Proxy Price of \$53.76 per MW-day and a Capacity Proxy Price of \$50.90 per MW-day have been used for 2026/2027 and 2027/2028 Delivery Years, respectfully.

For EY 2026, if Supplement A to the BGS-RSCP Supplier Master Agreement is approved by the BPU and the BRA for the 2025/2026 Delivery Year has not occurred at least five business days prior to the BGS-RSCP Auction, payments to BGS-RSCP Suppliers will be adjusted for the difference between the “Zonal Capacity Price,” which is the price paid by BGS-RSCP Suppliers for Capacity in the Company’s PJM Zone, as may be determined under the Reliability Pricing Model or its successor or otherwise, and the Capacity Proxy Price for the 2025/2026 Delivery Year.

For EY 2027, if Supplement A to the BGS-RSCP SMA is approved by the BPU and the BRA for the 2026/2027 Delivery has not occurred at least five business days prior to the BGS-RSCP Auction payments to BGS-RSCP Suppliers will be adjusted for the capacity price difference between the “Zonal Capacity Price,” which is the price paid by BGS-RSCP Suppliers for capacity in the Company’s RECO Zone, as

may be determined under the RPM or its successor or otherwise, and the Capacity Proxy Price for the 2026/2027 Delivery Year.

For EY 2028, if Supplement B to the BGS-RSCP SMA is approved by the BPU and the BRA for the 2026/2027 Delivery has not occurred at least five business days prior to the BGS-RSCP Auction, payments to BGS-RSCP Suppliers will be adjusted for the capacity price difference between the “Zonal Capacity Price” charged to BGS-RSCP Suppliers for Capacity in the Company’s RECO Zone, as may be determined under the Reliability Pricing Model or its successor or otherwise, and the Capacity Proxy Price for the 2027/2028 Delivery Year.

RECO will file new tariff sheets for EY 2027 and EY 2028, reflecting the impact of this price adjustment. The rate design spreadsheets include the formulas that will be used to reflect the impact of payments made pursuant to the Supplements. However, the spreadsheets do not provide a value for this true-up as the actual value is not known at this time. Attachment D provides an illustrative example of the calculation.

The SMA Supplements signed by BGS-RSCP Suppliers in February 2023 and February 2024 are still in effect for a portion of the load for EY 2026 (the year beginning June 1, 2025). Payments to BGS-RSCP suppliers that executed the Supplements to the SMAs approved by the Board on November 9, 2022 and November 27, 2023 will be adjusted for the price difference between the price paid by BGS-RSCP Suppliers for Capacity in the Company’s PJM Zone and the Capacity Proxy Price for the 2025/2026 Delivery Year. Upon the conclusion of the Third Incremental RPM Auction or the RPM’s successor or otherwise, the price paid by BGS-RSCP Suppliers

for Capacity in the Company's PJM Zone will be known. At that time RECO will file new tariff sheets reflecting the impact of the Supplements. The rate design spreadsheets include the formulas that will be used to reflect the impact of payments made pursuant to the Supplements executed by BGS-RSCP Suppliers in February 2023 and February 2024. Due to the delays in the BRA schedule a Capacity Proxy Price of \$53.76 per MW-day is used as an approximation for the Final PJM RPM Net Zonal Price for the 2025/2026 Delivery Year.

#### **J. Transmission Charges**

The transmission charges applicable to RECO's BGS-RSCP and BGS-CIEP customers are based on the currently effective transmission rates applicable to the RECO zone, as stated in PJM's Open Access Transmission Tariff ("PJM Transmission Rates"). The PJM Transmission Rates will change from time to time as FERC approves changes in the PJM Open Access Transmission Tariff. Such changes in the PJM Transmission Rates, including but not limited to changes associated with the Seams Elimination Charge/Cost Adjustments/Assignments ("SECA"), Transmission Enhancement Charges ("TECs") and Reliability Must Run ("RMR") charges, will result in changes to RECO's transmission rates applicable to its BGS-RSCP and BGS-CIEP customers. RECO will review and verify the basis for any transmission cost adjustment, and file supporting documentation from the PJM Transmission Rates as well as any rate translation spreadsheets used.

**K. DCFC Program**

In the November 9, 2022 BGS Board Order (BPU Docket No. ER22030127), the Board directed the EDCs to work with interested parties to come to a consensus in an attempt to find a Direct Current Fast Charging (“DCFC”) rate design solution to be included in each EDC’s 2024 BGS Auction proposal. RECO proposed to provide eligible customers with an incentive of up to 75% of the BGS-CIEP capacity charge of the customer bill, with an annual cap of \$12,600 per DCFC Plug. RECO would administer incentives annually and they would be available to DCFC stations taking service under the BGS-CIEP tariff. RECO would recover these incentives through the BGS-CIEP reconciliation charge. On November 17, 2023, the Board approved this program, with the program beginning June 2024 and ending May 2026. RECO launched the pilot program, RECO DCFC Per Plug Incentive – BGS (“PPI-BGS”), on June 1, 2024. As part of the launch, RECO updated its application portal to include the PPI-BGS program application, developed a Participant Agreement which is included on the application portal, and updated RECO’s ChargerReady program manual to include both the PPI-BGS program and RECO’s DCFC Per Plug Incentive program (the latter of which provides incentives toward the demand charges on the customer’s electric bill).

In addition, RECO updated its website to include information on the PPI-BGS program. RECO also developed processes and procedures to calculate and track the incentives paid. At this time, no DCFCs have enrolled in the PPI-BGS program, and no costs have been incurred to date

**L. Conclusion**

In connection with this filing, the Company requests that the Board issue an order making the following findings and determinations:

1. The Company's proposed treatment of its Committed Supply is approved by the Board;
2. The Company's proposed accounting for BGS is approved by the Board for purposes of accounting and BGS cost recovery;
3. There will exist a presumption of prudence with respect to the BGS Auction Plan method and the costs incurred for BGS service under the Auction Plan;
4. RECO's Contingency Plan is approved by the Board, and the costs incurred as a result of this Contingency Plan are presumptively prudent, subject to deferral, and approved for full and timely recovery;
5. The RECO-specific statewide Auction results are approved by the Board and produce BGS supply costs that are reasonable and prudent, subject to deferral, and approved for full and timely recovery;
6. The Company's proposal for its Central and Western Divisions is approved by the Board; and
7. The Company's Rate Design Methodology and Tariff Sheets are approved by the Board.

**GENERAL INFORMATION**

**No. 31 BASIC GENERATION SERVICE (“BGS”)**

- (1) Basic Generation Service – Residential Small Commercial Pricing (BGS-RSCP)  
Applicable to Service Classification Nos. 1, 2, 3, 4, and 6

Applicable to Service Classification Nos. 1, 2 (Non-Demand Billed), 3, 4, and 6  
Charges per kilowatthour:

<u>Service Classification</u>	<u>Summer Months*</u>	<u>Other Months</u>
1 (Non-TOD) – First 600 kWh	X.XXX¢	XX.XXX¢
1 (Non-TOD) – Over 600 kWh	XX.XXX¢	XX.XXX¢
1 (TOD) – Peak	XX.XXX¢	XX.XXX¢
1 (TOD) – Off-Peak	X.XXX¢	XX.XXX¢
2 - (Non-Demand Billed) – All kWh	X.XXX¢	X.XXX¢
3 – Peak	XX.XXX¢	XX.XXX¢
3 – Off-Peak	X.XXX¢	X.XXX¢
4 – All kWh	X.XXX¢	X.XXX¢
6 – All kWh	X.XXX¢	X.XXX¢

Applicable to Service Classification No. 2 Demand Billed customers who do not take BGS-CIEP service in accordance with General Information Section No. 31(2):

	<u>Summer Months*</u>	<u>Other Months</u>
Demand Charges		
All kW (\$/kW)	X.XX	X.XX
Usage Charges		
All kWh (¢/kWh)	X.XXX¢	X.XXX¢

The above Basic Generation Service Charges reflect costs for Energy, Generation Capacity, and Ancillary Services (including ISO Administrative Charges).

\*Definition of Summer Billing Months - June through September

---

**GENERAL INFORMATION**

**No. 31 BASIC GENERATION SERVICE (“BGS”) (Continued)**

(2) Basic Generation Service – Commercial and Industrial Energy Pricing (BGS-CIEP)

This service is applicable to all Service Classification No. 7 customers, and Service Classification No. 2 customers who maintain a billing demand of 500 kW or greater during any two months of a calendar year, taking BGS from the Company. Service Classification No. 2 metered customers who do not meet the above criteria may elect to take BGS-CIEP service on a voluntary basis. See General Information Section No. 31(1).

BGS Energy Charges:

Charges per kilowatthour:

BGS Energy Charges are hourly and are provided at the real time PJM Load Weighted Average Residual Metered Load Aggregate Locational Marginal Prices for the Rockland Electric Transmission Zone, plus Ancillary Services (including PJM Administrative Charges) at the rate of \$0.00640 per kilowatthour, adjusted for losses and applicable taxes.

BGS Capacity Charges:

Charges per kilowatt of Capacity Obligation as determined in accordance with General Information Section No. 31(C):

Charge applicable in Summer\* months.....\$ X.XXXX

Charge applicable in other months.....\$ X.XXXX

The above charges shall recover each customer’s share of the overall summer peak load assigned to the Rockland Electric Transmission Zone by PJM as adjusted by PJM assigned capacity related factors.

In accordance with Rider SUT, the above charges include provision for the New Jersey Sales and Use Tax. When billed to customers exempt from this tax, as set forth in Rider SUT, such charges will be reduced by the relevant amount of such tax included therein.

**Assumptions:**

- Gen Cost = \$72.11 per MW-day in summer  
\$68.88 per MW-day in winter
- Trans cost = \$ 53,766 per MW-yr
- Analysis time period = 4 summer months  
8 winter months
- Ancillary Services = \$ 24.71 /MWh
- Energy Costs = Based on Jun 2025 to May 2026 Forwards @ PJM West as of June 03, 2024  
Based on Jun 2024 to May 2025 Forwards @ NYISO Zone G and Lower Hudson Valley (LHV) as of June 13, 2024
- Usage patterns = Forecasted 2024 energy use by class, PJM on/off % from 2023 class load profiles,  
RECO billing on/off % from 6/23 to 5/24 actual data
- Obligations = Class totals for 2024
- Losses = Per RECO's Third Party Supplier Agreement adjusted for PJM 500kV losses and inadvertent energy.
- PJM Time Periods = PJM trading time periods - 7 AM to 11 PM weekdays, local time, x NERC  
Holidays - New Year's, Memorial, 4th of July, Labor Day, Thanksgiving & Christmas
- RECO Billing time periods = as per specific rate schedule
