

Mark-to-Market for BGS-RSCP Contracts

MtM Exposure Amount Calculation Information:

Table 1 contains the illustrative marks¹ for each month of the BGS-RSCP Auction period. Monthly marks are provided for June 2026 through May 2029. For the months, two-month blocks,² or quarterly blocks² where broker³ quotes are available, broker quotes will be used for those months. For all the remaining months the EDCs will use a proprietary method that reflects forward market conditions.

The method described above will be employed from January 26, 2026 through February 04, 2026. From February 05, 2026 through the day of the close of the BGS-RSCP Auction, only the months for which a monthly, a two-month block or a quarterly block quote is available will be updated. The mark for each Billing Month is the mark that was calculated on the date that the BGS-RSCP Auction closes and will not change over the life of the contract. After the close of the BGS-RSCP Auction Forward Market Prices will change. In addition, the on-peak and off-peak loads used to calculate the MtM Exposure Amount will be adjusted periodically to reflect the most current information.

Forward Market Prices for the months, two-month blocks or quarterly blocks where broker quotes are available will be equal to the broker quotes. In case quotes for a component of a block and for the block are both available, the EDCs reserve the right not to use both the component of a block and the block if they are inconsistent with each other. However, when this inconsistency occurs the EDC must use either the component or the block. Forward Market Prices for the months, two-month blocks or quarterly blocks where broker quotes are unavailable will be equal to the last available broker quotes or in case they have not been quoted on the broker sheets since the BGS-RSCP Auction closed, they will be equal to the marks set at the close of the BGS-RSCP Auction.

¹ Illustrative marks represent PJM Western Hub on-peak prices.

² For two-month and quarterly blocks for which the average for the block and a component of the block are both quoted, the component will be equal to its quoted price and the other months in the block will be constructed so that the weighted average (weighted by on-peak hours in each month) of the block equals the quote for the block; e.g., Q4 2026 = \$50 and Oct 2026 = \$40; therefore, Oct 2026 = \$40 and Nov-Dec 2026 = $(\$50*(352+320+352)-\$40*352)/(320+352) = \$55.24$. If only the block is quoted, that price will be used for all relevant months; e.g., Jan/Feb 2027 = \$35, then Jan 2027 = \$35 and Feb 2027 = \$35.

³ The term broker as used in the BGS-RSCP Supplier Master Agreement encompasses both independent brokers or exchanges active in the energy market.

As indicated in Appendix B, on the day the Auction closes parameters will also be set for:

- The monthly on-peak load per tranche for each EDC (see Table 2)
- The monthly off-peak load per tranche for each EDC (see Table 2)
- The ratio between historical off-peak and on-peak energy prices (see Table 3)

The values provided in Table 2 and Table 3 are those that the EDCs intend to use for Appendix B when signing the contract. The EDCs do not anticipate any changes to Table 2 or Table 3 between now and the day the Auction closes.

Monthly Loads per Tranche

The monthly on-peak and off-peak loads per tranche are used when calculating the MtM. These loads are based on historical numbers and are subject to change by the EDCs.
